

# What trends can we observe regarding the percentage values over the years?

## INTRODUCTION

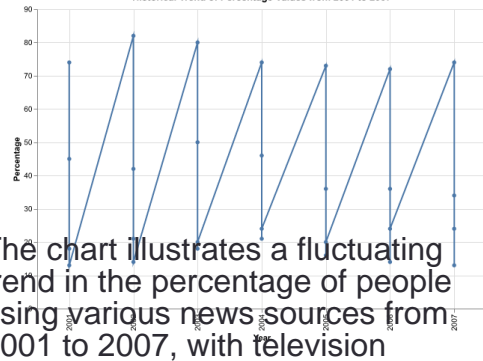

This poster explores the trends in percentage values over the years, focusing on the significant changes observed from 2001 to 2007. Through visualizations, we will analyze the remarkable increase in percentage from 2001 to 2002, where it rose to 6.31 times the previous year, and the subsequent decline observed by 2007, where the percentage fell to 6.31 times less than that of 2002. By examining these trends, we aim to provide a comprehensive understanding of the fluctuations in percentage values across this period.

Percentage of News Sources in 2002

The chart illustrates that in 2002, television was the dominant news source, significantly outpacing newspapers, radio, and the internet.

Historical Trend of Percentage Values from 2001 to 2007

The chart illustrates a fluctuating trend in the percentage of people using various news sources from 2001 to 2007, with television consistently remaining the most popular medium throughout the period.

News Source Percentage in 2007

The chart shows that in 2007, Television was the dominant news source, significantly outpacing other mediums like Newspapers, Radio, and the Internet.

## CONCLUSION

From the charts, users can learn that television has consistently been the leading news source from 2001 to 2007, significantly surpassing newspapers, radio, and the internet in popularity. The data also shows a general fluctuation in the percentage of people using these news sources, but television maintained its dominance throughout the specified period.
